

PROJECT NAME: **TeenTalk**

TEAM MEMBERS: Albescu Ana-Yarina,
Medvedev Medeea-Ştefania
Sandu Teodora-Elena
Stoica Briana-Maria

IDEA IN SHORT:

TeenTalk is a mobile application that provides teenagers with structured information on sexual education, covering topics such as consent, contraception, sexually transmitted diseases, puberty, and anatomy. The app includes educational videos and interactive quizzes based on this content. It also features a dedicated section for underage mothers with practical advice and an AI assistant that answers questions privately, helping users make informed decisions.

Hardcore Entrepreneur hackathon 6.0

1.PRODUCT - PROBLEM WE SOLVE

The problem we solve is the lack of access to clear, structured sexual education, combined with limited support for underage mothers. Romania records one of the highest teenage pregnancy rates in Europe, with nearly 17,000 girls under the age of 18 giving birth each year and around 1 in 10 children born to a minor. These figures highlight a significant gap in how young people receive essential information and guidance.

Many teenagers grow up without reliable education on these topics. They rely on uncertain sources or avoid asking questions due to stigma, which affects their understanding and decision-making. This lack of clarity has direct consequences during a critical stage of their development.

At the same time, girls who become mothers at a young age often face this situation without adequate support. Limited access to guidance and resources makes it difficult to continue their education and manage new responsibilities, reducing their opportunities and increasing long-term vulnerability.

2. OUR TARGET GROUP & [SDGs](#)

TeenTalk targets adolescents aged 12 to 18 who lack access to clear, structured, and reliable sexual education during a critical stage of their development. This group often relies on misinformation and lacks safe spaces to ask important questions, which increases the risk of uninformed decisions.

A key focus is on girls at risk of early pregnancy, as well as underage mothers who already face serious challenges, including interrupted education, financial instability, and limited access to support. By addressing both prevention and support, TeenTalk responds directly to the needs of vulnerable young people.

Through this approach, the project contributes to several SDGs such as: SDG 3, Good Health and Well-being; SDG 4, Quality Education; SDG 5, Gender Equality.

3. SMART OBJECTIVES

4. PRICE

5. PROMOTION

Specific: We will launch the app and integrate it into schools through partnerships, providing structured access to sexual education for teenagers.

Measurable: The app aims to reach at least 10,000 downloads, track active users, and monitor lesson completion rates within the first year.

Achievable: TeenTalk plans to partner with a minimum of 20 schools, using existing networks and digital promotion to reach its target audience.

Relevant: These objectives support the mission of improving access to reliable sexual education and reducing early pregnancies among teenagers.

Time-bound: All objectives are set to be achieved within the first 12 months after launch, allowing clear tracking of progress and results.

TeenTalk uses a sustainable revenue model that separates education from social support. The sexual education component of the app will be monetized, with schools paying an annual subscription of approximately €400 to integrate the platform into their programs, and individual users paying €2 per month for full access to educational content.

TeenTalk will also partner with NGOs and public institutions that can fund access for vulnerable groups, ensuring inclusivity and wider reach among teenagers who cannot afford the subscription.

In contrast, the support section dedicated to underage mothers will remain completely free for all users. This ensures immediate access to guidance and resources without financial barriers, while the monetized education segment will sustain the platform’s development and growth.

TeenTalk reaches its target audience through strategic partnerships with schools, where the app is integrated into classes and workshops, ensuring direct and scalable access to students. This approach allows consistent interaction with users in an educational context. The platform is promoted on TikTok and Instagram through short, engaging content designed to capture attention and drive rapid downloads among teenagers. These channels enable high visibility and fast growth within the target group. Partnerships with NGOs and youth organizations support expansion into diverse communities and improve access for at-risk groups.

Success will be measured through key indicators such as app downloads, active users, lesson completion rates, and social media engagement.
